

PROFESSIONAL SUMMARY

- Software Engineer with 4 years of combined professional and internship experience in Banking, Industrial Automation, Medical Devices, and Business Analytics, delivering high-quality software solutions.
- Experienced in Manual Testing, Functional, Regression, Smoke, Integration, API, and User Acceptance Testing (UAT) across the SDLC and STLC within Agile Scrum environments.
- Proficient in designing test plans, test cases, test scenarios, executing test cycles, and managing the end-to-end defect lifecycle using JIRA.
- Hands-on experience performing SQL database validation, backend data verification, API testing using Postman, and release validation to ensure software quality and data integrity.
- Tested enterprise banking applications, payment processing systems, embedded software, hardware control systems, and medical device applications, ensuring reliability, functionality, and compliance with business requirements.
- Strong Business Analysis experience in requirements gathering, process mapping, stakeholder communication, workflow documentation, data validation, and UAT support, bridging business needs with technical solutions.
- Skilled in collaborating with Business Analysts, Developers, Product Owners, and cross-functional teams to review requirements, resolve defects, and support successful software releases.
- Proficient in JIRA, Postman, SQL, MySQL, Python, Git, GitHub, Linux, C++, Power BI, Tableau, and Excel, supporting testing, automation, and data-driven decision-making.
- Strong understanding of software quality assurance, defect prevention, root cause analysis, test documentation, and continuous process improvement to enhance product quality.

TECHNICAL SKILLS

Quality Assurance: Manual & Black-Box Testing • Functional • Regression • API Testing • Test Case Design • SQL Database Validation • UAT • SDLC • STLC • Agile Scrum • Defect Tracking

Testing & Dev Tools: JIRA • Postman • Git • GitHub • Linux

Programming & Databases: Python (Pandas, NumPy, Matplotlib, Seaborn, XGBoost) • C++ • SQL • MySQL

BI & Analytics: Power BI • Tableau • Excel (Advanced) • Data Visualization • EDA • KPI Development

BA & Process: Requirements Analysis • Process Mapping • Stakeholder Communication • Lucidchart • Visio

EDUCATION

M.S., Information Systems & Technologies — University of North Texas
Denton, TX

May 2026

B. Com (Honours), Finance & Business Analytics — Jain University
Bengaluru, India

Jun 2023

PROFESSIONAL EXPERIENCE

Software Engineer Intern | Best Automation & Robotics Company
Loves Park, IL

Aug 2024 – May 2026

- Built and tested a Python-based label automation pipeline integrating real-time SCADA data retrieval with MySQL storage, eliminating manual data handling and reducing data-entry errors.
- Automated formatted label generation and direct Zebra printer transmission with output verification checks, processing a few hundred labels per day and cutting manual labelling effort across daily production runs.

- Designed and unit-tested 7 UI components for the HDRA medical equipment project, translating operator requirements into functional, validated controls through iterative test cycles.
- Conducted usability testing on button logic, layout, and control flow, identifying and resolving interface defects to improve operator interaction with the medical device system.
- Implemented and integration-tested hardware control logic using ACS software, verifying low-latency, reliable communication between software and physical equipment.
- Built, tested, and delivered a complete hardware control system and UI for a catheter hole-punching machine using C++, Linux, Raspberry Pi, and sFoundation, owning quality end-to-end.
- Wrote Python validation scripts to confirm SCADA data completeness and accuracy before MySQL insertion, preventing downstream data quality issues in production pipelines.
- Collaborated with mechanical and electrical engineers to translate hardware specs into software control logic, documenting interface requirements and test outcomes for cross-team handoff.
- Maintained technical documentation including system design notes, test logs, and defect reports to support project continuity and knowledge transfer across the engineering team.
- Applied Agile best practices in sprint planning and code reviews, tracking tasks in JIRA and consistently delivering software increments on schedule across multiple concurrent projects.

Business/Quality Assurance Analyst | Deutsche Bank
Bengaluru, India

Aug 2023 – Jun 2024

- Executed end-to-end functional, regression, smoke, and API testing — averaging around 10 test cases per sprint — for enterprise banking applications covering payment processing, account management, and financial transaction workflows.
- Designed and maintained test plans, test scenarios, and test scripts from business and functional requirements, improving coverage and surfacing critical defects early in the SDLC.
- Performed backend SQL database validation to verify financial transactions, customer records, and system integrations, ensuring data accuracy, integrity, and regulatory compliance.
- Conducted API testing via Postman, validating request/response payloads, status codes, error handling, and data consistency across integrated banking services.
- Partnered with a cross-functional team of roughly 7 Business Analysts, Developers, and Product Owners in Agile Scrum ceremonies to review requirements, refine user stories, and define acceptance criteria.
- Managed defect lifecycle in JIRA — logging, triaging, assigning, tracking, and verifying bug fixes, typically resolving defects within 2–3 days depending on volume, to maintain production-ready release quality.
- Supported User Acceptance Testing (UAT) by preparing test environments, coordinating with stakeholders, and documenting sign-off criteria prior to each release.
- Ran post-deployment smoke testing and release validation, confirming application stability and catching production issues before they impacted end users.
- Identified recurring defect patterns and proposed preventive measures, updating test documentation to reflect evolving business requirements and reduce regression risk.
- Collaborated with compliance and operations teams to verify banking workflows met internal audit standards and regulatory requirements across APAC and German operations.

Business Analyst Intern | Verezo with IBM
Bengaluru, India

Jan 2022 – Jan 2023

- Cleaned, transformed, and validated large-scale ERP datasets using Python (Pandas, NumPy), performing data quality checks to resolve inconsistencies prior to reporting and analysis.

- Optimized SQL and MySQL queries for ERP data extraction, transformation, and loading, improving pipeline performance by roughly 24% and reducing query execution time for recurring business reports.
- Conducted exploratory data analysis (EDA) to identify operational trends, define KPIs, and deliver actionable insights supporting data-driven decisions across multiple business departments.
- Gathered and documented business and functional requirements through structured stakeholder interviews and process walkthroughs, driving project scoping and solution design.
- Created detailed process maps and workflow documentation in Lucidchart and Microsoft Visio, improving process transparency and serving as a baseline for requirements validation.
- Developed and validated Power BI and Tableau dashboards, enabling stakeholders to monitor KPIs, track operational bottlenecks, and make faster, evidence-based business decisions.
- Collaborated with cross-functional teams to translate business requirements into data models and analytical solutions aligned to strategic objectives and reporting standards.
- Supported UAT and data validation by preparing test data, writing business-requirements-aligned test scenarios, and coordinating stakeholder feedback for formal sign-off.
- Produced weekly and monthly operational reports summarizing key metrics, performance variances, and trend analysis to support management reviews and strategic planning.
- Assessed and documented ERP system gaps, contributing process improvement recommendations that enhanced data accuracy and reporting efficiency across multiple business units.

PROJECTS

Retail Sales Analysis & Demand Forecasting

Python • XGBoost • Excel

- Built an XGBoost demand forecasting model with customer segmentation on retail sales data; delivered dashboards supporting inventory planning and targeted marketing decisions.
- Applied feature engineering and model evaluation techniques to improve forecast reliability, strengthening practical skills in predictive analytics and inventory optimization.

Logistics Revenue & Route Performance Analysis

Python • SQL • Excel

- Queried and analyzed carrier/route datasets via SQL and Python to surface revenue opportunities, pricing inefficiencies, and geographic performance gaps across logistics operations.
- Translated query findings into clear business recommendations, building stronger SQL optimization and data storytelling skills for stakeholder-facing analysis.

Social Media Engagement Dashboard

Tableau

- Designed an interactive Tableau dashboard visualizing engagement across sentiment, time, and geography to enable data-driven campaign strategy and performance monitoring.
- Combined multiple data dimensions into a single interactive view, deepening hands-on experience with calculated fields, filters, and dashboard usability design.

Digital Transformation in the Automotive Industry

Python • Excel • Research

- Analyzed EV adoption trends, digital retail shifts, and customer review data to assess the impact of digital transformation on automotive sales strategy and customer experience.
- Synthesized qualitative research with quantitative trend data to form strategic recommendations, reinforcing market research and evidence-based decision-making skills.
